

Committed to Great Lakes research

Veolia Water Milwaukee is committed to funding research into water issues of emerging concern, making advances whose impacts will be felt not only in the Great Lakes region – but around the world. As new residuals, such as pharmaceuticals, are detected in the earth's waters, it is critical that we understand their presence and pursue cutting-edge processes to remove them. By committing \$1.5 million over ten years to this new field of research, we are striving to make important advances in wastewater treatment technology.

Sustainability

At Veolia Water Milwaukee, our business is all about sustainability. From protecting biodiversity to conserving fuel and reducing emissions by practicing Eco-Driving techniques, we constantly strive to find ways to reduce the environmental footprint of wastewater treatment in Milwaukee. In addition, we place a high priority on the human side of our business, including maintaining one of the best safety records in our industry and developing a robust supplier diversity program.

Operational Excellence

The successful partnership between Veolia Water North America and the Milwaukee Metropolitan Sewerage District (MMSD) has been recognized by the National Association of Clean Water Agencies (NACWA) for 100% environmental compliance with the Clean Water Act. The Milwaukee operations have been awarded the Platinum Peak Performance Awards each year since 2008 when Veolia Water began our ten year operations & maintenance contract.

Educational Resources

Tours

Veolia Water Milwaukee offers tours of Jones Island water reclamation facility to schools, professional groups, and community organizations. Tour content can be tailored to your group's needs and provide a fascinating behind-the-scenes view of what it takes to clean wastewater to award-winning levels.

Tours are available to school groups 5th grade and above, in addition to community and professional organizations.

The Water Box

The Water Box is an education tool developed by Veolia Water that helps educate 5th grade students about the water cycle, water treatment, and the environment at large. The Water Box provides all necessary supplies for

- CD Contents Include:
- Teachers Handbook
 - 25 Experiments
 - Water Treatment Cycle Poster

25 hands-on experiments and activities, a teacher's manual and a companion CD. It has been matched to State of Wisconsin DPI science curriculum standards and will be aligned with the Next Generation Science Framework.

Workshops for teachers that introduce the Water Box are offered throughout the year. Both the Water Box and workshop are offered free of charge for teachers within the MMSD service area.
