

Veolia's Lead Service Line Replacement Program:

Protecting Our Communities

Since 2019, we've invested $240 million in an ambitious initiative to eliminate lead from New Jersey's water infrastructure. More than a dozen crews are sweeping through municipalities to replace lead lines while our water quality specialists continue to rigorously test of water samples and monitor corrosion control treatments.

Our commitment: Delivering superior water quality to all New Jersey communities.

Key Program Achievements & Features:

- Replacing more than 19,000 lead service lines across 60 municipalities.
- Offering replacement of customer-owned lead lines at no cost to the property owner, eliminating financial barriers to safer water.
- Implementing cutting-edge corrosion control treatments.
- Consistently maintaining lead levels significantly below regulatory requirements.
- Providing transparent progress updates to communities.
